

Protecting your Workday configuration, data and users from the unexpected couldn't be easier. **Just ask our Smart™ customers.**

Smart™ Security Testing

“ Using Kainos Smart is really benefitting our testing process...We're all aware that security plays a wider role in our HCM data world. Smart helps us a lot with automated testing around security—especially field-level permissions and the available actions. We use Smart's security testing every week to make sure all of our security policies are in place. We are seeing a lot of benefits using Smart, especially for regression testing...I would highly recommend using Smart.

Sudha Ramalingam

HRIS Test Engineer
Netflix

“ Several releases ago there was an undocumented change to a security domain in our Workday configuration that secured data for our finance team. If we hadn't been using Smart's security testing, we wouldn't have discovered the issue until it reached our Help Desk. It helped us proactively modify that security before our end-users even knew there was an issue.

Greg Holliday

Director, HRIS
Service Corporation International

More customers who count on Smart™ every week
